SUMMARY

U.S. Citizen — authorized to work in the U.S. without visa sponsorship. Software engineer experienced across the full software development life cycle: **production full-stack applications**, cloud deployment on **Microsoft Azure**, real-time data pipelines, and cross-functional team leadership in agile environments.

EDUCATION

University of California, Davis

Graduated June 2026

Bachelor of Science in Computer Science

- Coursework: Data Structures & Algorithms, Operating Systems, Computer Networks, Software Engineering, Applied Cybersecurity

SKILLS

Languages: Python, Java, C, C++, TypeScript, JavaScript, SQL, Rust, R

Cloud & Data: Microsoft Azure, MongoDB, SQL/SQLite, Redis, relational data modeling, REST APIs, Tableau

Frameworks & Tools: Node.js, Next.js, React, React Native, Prisma ORM, Zod, GitHub, CI/CD, AGILE development

EXPERIENCE

Software Engineer — Department of Internal Medicine at UC Davis

Jan 2026 — July 2026

- Designed, coded, tested, and documented a full-stack funding workflow platform in Next.js and TypeScript apart of a small team, digitizing **500+ departmental submissions** and projected to eliminate **250+ hours** of manual processing annually.
- Deployed and maintained the app on **Microsoft Azure**, managing the production and release process.
- Engineered relational data models with Prisma ORM and MongoDB to manage multi-stage approval states and full revision history with end-to-end type safety.
- Built a **tokenized, email-based approval system** enabling asynchronous multi-reviewer workflows, cutting manual status follow-ups to zero.
- Enforced strict **runtime validation** with Zod schemas across API boundaries, eliminating a class of type-mismatch bugs.
- Completed a **structured handoff** to the department's team, delivering technical documentation and walkthroughs that enabled continued maintenance without the original developer.

Software Lead — MuscleMaxx Startup

Jan 2025 — Present

- Leading software development for a wearable fitness product, delivering **real-time muscle activity and motion insights** to a cross-platform React Native/TypeScript app.
- Architected a **real-time data pipeline** with SQLite and Node.js to support live sensor-signal graphing, post-processing, and persistent session history.
- Performed **end-to-end integration and system testing** across device firmware and app, validating data integrity, connection reliability, and latency.
- Directing a 5-person cross-functional team across software, hardware, and business, aligning delivery milestones with defined scope and schedule.

PROJECTS

GitHub Data Fetcher — Rust CLI Tool

Sept 2025 — Nov 2025

- Developed a **Rust CLI tool** interfacing with GitHub REST API to retrieve repository/issue metadata, applying SOLID principles, object-oriented design, and asynchronous programming in a modular architecture.
- Cached structured JSON in Redis, improving query efficiency and reducing API calls by **80%**.

LEADERSHIP

National Outreach Lead / Project Manager, ColorStack @ UC Davis

Dec 2023 — June 2026

- Represented UC Davis in national meetings; planned events increasing membership by **30%**, supporting underrepresented students in tech
- Oversaw website development & GitHub repository, improving members' technical collaboration
